

Fix for high points scoring where a certain number of races are needed to qualify

Having tested this fix with sailwave, i wanted to give this to any one who uses the high points scoring system..

If we made DNC -10000000 (this number is a number that will make dnc obsolete to any number of entrances to a race series so dnc will not count in the formula as it does at present)

You have to have a large minus figure as shown above.

This fixes issues where the final series results show people who haven't qualified beating people who have.

If any club that uses this fix please let me know so I can add you to this list.
